

Miguel Magalhães

Cyber Security Consultant | Identity and Access Management

Recruitment Team
Infineon Technologies | Porto

Subject: Application for Cyber Security Consultant - Identity and Access Management

Dear Recruitment Team,

I am writing to apply for the Cyber Security Consultant - Identity and Access Management position in Porto. Infineon's focus on secure, resilient and future-ready identity services is closely aligned with the direction in which I am developing my career: combining practical systems experience with cybersecurity, risk awareness and continuous improvement.

I hold a Bachelor's degree in Computer Engineering and a Higher Professional Technical Diploma in Computer Networks and Systems, and I am currently pursuing a Master's degree in Cybersecurity and Information Systems Auditing. This academic path has strengthened my foundations in network security, access control, cryptography, systems administration, risk and data protection.

At NewCoffee's Information Systems Department, I supported users across different departments and locations and worked directly with identity and access tasks in Microsoft Active Directory. I created and managed user accounts, groups, permissions and access rights, supported VPN and business application access, investigated authentication and connectivity incidents, and documented changes and resolutions. This experience gave me a practical understanding of identity lifecycle activities, least-privilege decisions and the operational impact of access controls.

My cybersecurity projects have included an international AI-based network intrusion detection laboratory using Python, Wireshark and Snort, as well as the design of security policies, network controls, cryptographic protections and data-protection measures for a simulated corporate environment. Through full-stack projects, I have also implemented authentication, role-based permissions, protected APIs, validation and secure handling of application data.

My professional IAM exposure is currently grounded in hands-on identity administration and user support rather than enterprise-scale IAM architecture. I am nevertheless highly motivated to deepen my knowledge of Entra ID, federation, privileged access management, Zero Trust, threat modelling and IAM governance. I would bring a structured problem-solving approach, clear communication, customer focus and the discipline to challenge assumptions while learning from experienced architecture, engineering and security teams.

I have professional working proficiency in English and experience collaborating in an international academic team. I am available for the hybrid working model in Porto and would welcome the opportunity to discuss how my technical foundation, cybersecurity studies and commitment to growth could contribute to Infineon's Corporate Cyber Security and Privacy team.

Kind regards,

Miguel Magalhães
