

Miguel Magalhães

Cyber Security Analyst | Security Operations Centre

Recruitment Team
Maple Networks

Subject: Application for Cyber Security Analyst - Nights

Dear Recruitment Team,

I am writing to apply for the Cyber Security Analyst - Nights position at Maple Networks. The opportunity to begin and develop my Security Operations Centre career within a managed security services environment strongly appeals to me, particularly because it combines proactive monitoring, incident response, customer support and continuous learning.

I hold a Bachelor's degree in Computer Engineering and a Higher Professional Technical Diploma in Computer Networks and Systems, and I am currently pursuing a Master's degree in Cybersecurity and Information Systems Auditing. My education has provided a solid foundation in Windows and Linux systems, TCP/IP networking, access control, cryptography, risk, data protection and secure systems administration.

At NewCoffee's Information Systems Department, I acted as a first point of contact for users across different departments and locations. I logged, investigated and followed technical incidents involving Windows devices, accounts and permissions, Active Directory, VPN, DHCP, connectivity, business applications and endpoint hardware. I documented actions, coordinated with external providers when escalation was required, and validated outcomes with users. I also developed an internal ITSM platform for tickets, assets and operational indicators, strengthening my understanding of incident workflows, prioritisation, traceability and service levels.

My most relevant cybersecurity project was an international AI-based network intrusion detection laboratory. I helped configure isolated virtual environments, generate baseline traffic, capture and analyse packets with Wireshark, simulate controlled attacks and validate alerts using Snort. The project combined network security, Python-based data processing and machine learning to support the identification of malicious activity. Additional projects covered security policies, cryptographic protections, secure proxy configuration and access control.

Although I am at the beginning of my professional SOC career, I bring practical IT operations experience, an analytical and methodical approach, and a strong sense of ownership. I am keen to develop hands-on expertise with Microsoft Sentinel, SIEM and SOAR workflows, vulnerability management and public cloud security. I understand the importance of clear escalation, accurate documentation, SLA follow-up and calm communication when supporting customers during incidents.

I have professional working proficiency in English and experience collaborating in an international team. I understand the schedule required for this role and am prepared to work flexible overnight and weekend shifts in a remote environment. I would welcome the opportunity to discuss how my technical background, cybersecurity training and motivation to learn could contribute to Maple Networks and its customers.

Kind regards,

Miguel Magalhães
