APPLICATION FOR INFRASTRUCTURE & PLATFORM ENGINEER

Dear Hiring Team,

I am writing to apply for the Infrastructure & Platform Engineer position at Dstny. I hold a degree in Computer Engineering, completed technical training in Computer Networks and Systems, and am currently pursuing a Master's degree in Cybersecurity and Computer Systems Auditing.

My experience combines IT operations, systems support, networking, databases, scripting and application troubleshooting. At NewCoffee, I provided first-line technical support to hundreds of users across five locations, handling approximately 20 to 40 daily requests involving business applications, hardware, software, accounts, permissions and network connectivity.

I worked with Windows environments, Active Directory, DNS, DHCP, VPN, Microsoft 365, Microsoft SQL Server and IIS. I reproduced problems where possible, collected technical evidence, analysed system and application dependencies, documented the actions performed and escalated complex cases with a structured handover. I also contributed to an internal ITSM and asset-management platform using React, JavaScript, PHP, Python, SQL Server and REST APIs.

During my internship at Aquário Eletrónica, I developed Python scripts for data collection and task automation and supported Microsoft SQL Server, Primavera ERP and local network infrastructure. More recently, I delivered a production appointment-booking platform using React, TypeScript, REST APIs and serverless functions. I configured its deployment and diagnosed integration issues through logs, HTTP responses, environment settings and end-to-end data flows.

I have practical knowledge of Windows and Linux, Active Directory, DNS, DHCP, IIS, TCP/IP, SQL, Python, Git, APIs and application deployment. I am motivated to deepen my experience in production Linux administration, server lifecycle management, patching, hardening, backup and recovery, monitoring, containers and CI/CD. While I am still developing hands-on experience with Foreman, RabbitMQ, Kubernetes, Prometheus and Grafana, I bring a solid systems foundation, structured troubleshooting habits and strong learning agility.

Dstny's international environment and focus on reliable cloud and telecommunications platforms strongly match the direction in which I want to develop my career. I value operational ownership, clear runbooks, reusable procedures and the automation of repetitive work, and I would welcome the opportunity to contribute while expanding my infrastructure and platform-engineering capabilities alongside your team.

Thank you for considering my application. I would be pleased to discuss my experience and motivation in an interview.

Yours faithfully,

Miguel Magalhães
