

Miguel Magalhães

Machine Learning Engineer | Data Engineer - Porto

Hiring Team
DBServices Portugal

Subject: Application for Machine Learning Engineer | Data Engineer - Porto

Dear DBServices Hiring Team,

I am writing to apply for the Machine Learning Engineer | Data Engineer position in Porto. DBServices' work in digital transformation, cloud, DevOps and rapid prototyping is particularly appealing to me because it connects software engineering discipline with the delivery of practical, production-oriented solutions.

I hold a degree in Computer Engineering and a Higher Professional Technical Course in Computer Networks and Systems, and I am currently pursuing a Master's in Cybersecurity and Computer Systems Auditing. My technical foundation includes Python, SQL, PostgreSQL, Microsoft SQL Server, REST APIs, Git, Linux, data modelling and automation, supported by experience building applications that depend on reliable data flows.

In an international COIL project on network intrusion detection, I helped configure isolated test environments, generate and capture network traffic, structure logs and prepare datasets for preprocessing and model evaluation. Using Python, pandas, NumPy and scikit-learn, I worked with KNN, SVM, decision trees and Random Forest, gaining a practical understanding of the data lifecycle surrounding machine learning workflows.

At Aquário Eletrónica, I developed Python scripts for web scraping, data collection and task automation, while supporting SQL Server administration and its integration with Primavera ERP. At NewCoffee, I built an ITSM platform that combined ticket, asset, user and operational data through SQL Server, REST APIs and dashboards. These projects strengthened my approach to validation, traceability, documentation and systematic troubleshooting.

My experience spans software, data, systems and cybersecurity, and I am now deliberately focusing on the engineering side of data and machine learning. I am motivated to deepen hands-on experience with Spark, Databricks, Airflow, MLflow, Kafka, Delta Lake, Azure ADLS and Azure DevOps, building on my current strengths in Python, SQL, APIs, Git and technical problem-solving.

I would welcome the opportunity to discuss how my practical foundation, curiosity and disciplined approach could contribute to DBServices and to reliable data and machine learning platforms for its clients.

Kind regards,

Miguel Magalhães
