Cloud Security Specialist - Maia

Talent Acquisition Team
Infineon Technologies

Subject: Application for Cloud Security Specialist - Maia

Dear Infineon Hiring Team,

I am writing to apply for the Cloud Security Specialist position in Maia. Infineon's work in secure IoT, efficient energy and digitalisation is especially meaningful to me, and I am motivated by the opportunity to help strengthen the controls that support trusted and resilient technology.

I hold a degree in Computer Engineering and a Higher Professional Technical Course in Computer Networks and Systems, and I am currently pursuing a Master's in Cybersecurity and Computer Systems Auditing. My foundation includes Windows and Linux systems, Active Directory, Microsoft 365, network security, access management, log analysis, data protection and basic system hardening.

At NewCoffee, I managed user accounts, groups, permissions and access rights, supported Windows endpoints, VPN services and network connectivity, and investigated incidents affecting users and business applications. I documented interventions, coordinated with external providers and translated technical findings into clear information for colleagues with different levels of technical knowledge.

In an international network intrusion detection project, I configured isolated Linux environments, generated and analysed network traffic and worked with Wireshark, Snort and structured security logs. This experience reinforced a control-oriented approach: collect evidence, validate alerts, isolate causes, document findings and verify that changes improve security without disrupting legitimate activity.

My current strength is the systems and security foundation behind effective cloud posture management. I am now deliberately deepening my knowledge of AWS, Azure and GCP security controls, CSPM, CIS benchmarks, compliance monitoring and automation. I am particularly interested in learning to configure and optimise platforms such as Wiz and CIS Security Suite beyond standard templates and to turn governance requirements into measurable technical controls.

I would welcome the opportunity to discuss how my analytical approach, practical security background and commitment to continuous learning could contribute to Infineon's cloud security team.

Kind regards,

Miguel Magalhães
