Subject: Application for Cyber Security Consultant - IAM

Dear Infineon Hiring Team,

I am writing to apply for the Cyber Security Consultant - Identity and Access Management position. The opportunity to help shape secure identity services, access controls and consistent IAM standards across Infineon's global technology environment is closely aligned with the direction in which I am developing my career.

I hold a degree in Computer Engineering and a Higher Professional Technical Course in Computer Networks and Systems, and I am currently pursuing a Master's in Cybersecurity and Computer Systems Auditing. My foundation includes Active Directory, Windows and Linux systems, Microsoft 365, network security, access management, authentication, data protection, log analysis and basic system hardening.

At NewCoffee, I created and managed user accounts, groups, permissions and access rights through Active Directory and internal systems. I supported access incidents affecting business applications, VPN services and company resources, documented interventions and worked with users and external providers to restore access while preserving appropriate controls and operational continuity.

My software projects have also involved authentication, REST APIs, database operations and validation of user-facing workflows. In an international intrusion detection project, I configured isolated Linux environments, analysed network traffic and security logs and validated alerts with Wireshark and Snort. These experiences strengthened my ability to reason about trust boundaries, evidence, risk and secure system behaviour.

My strongest practical IAM foundation is currently Active Directory and day-to-day access administration. I am deliberately expanding it towards Entra ID, identity lifecycle management, privileged and just-in-time access, federation, token-based authentication, workload identity and Zero Trust. I am also motivated to deepen my practice in threat modelling, secure design reviews and the translation of NIST and ISO-based requirements into effective technical controls.

I would welcome the opportunity to discuss how my practical identity and systems background, analytical approach and commitment to continuous learning could contribute to Infineon's Corporate Cyber Security and Privacy team.

Kind regards,

Miguel Magalhães
