Data Engineer Junior - Porto

Hiring Team
One Logic Consulting

Subject: Application for Data Engineer Junior - Porto

Dear One Logic Hiring Team,

I am writing to apply for the Data Engineer Junior position in Porto. One Logic's developer-led culture, current engineering practices and commitment to continuous learning appeal to me as I build my career around data and reliable software.

I hold a degree in Computer Engineering and a Higher Professional Technical Course in Computer Networks and Systems, and I am currently pursuing a Master's in Cybersecurity and Computer Systems Auditing. My practical foundation includes Python, SQL, Microsoft SQL Server, MySQL, PostgreSQL, REST APIs, data modelling and Git.

At Aquário Eletrónica, I developed Python scripts for web scraping, data collection and task automation, while supporting SQL Server administration and its integration with Primavera ERP. More recently, I built an internal ITSM platform that brought together data on tickets, assets, users, departments and operational indicators through SQL Server and dashboards. These projects required structured data modelling, validation, query work, integration logic and clear documentation.

I also developed and deployed a healthcare appointment platform in which reliable database operations, API integrations and validation rules were essential. Investigating inconsistent records and integration failures strengthened my habit of tracing issues methodically, checking assumptions and confirming outcomes through tests and technical evidence.

My path combines software, databases, systems and support, giving me a broad view of how data moves through real applications and operations. I am now deliberately specialising in data engineering, building on a practical base in Python, SQL, integrations, data quality and troubleshooting. I am particularly motivated to deepen hands-on experience with Apache Flink, Apache Iceberg, AWS data services, orchestration and large-scale pipelines.

I would welcome the opportunity to discuss how my technical foundation, curiosity and sense of responsibility could contribute to One Logic and its financial-services client.

Kind regards,

Miguel Magalhães
