Pixida Portugal

Subject: Application for Technical Support Engineer - Porto

Dear Pixida Hiring Team,

I am writing to apply for the Technical Support Engineer position in Porto. The opportunity to support Teleservices and aftersales features for upcoming vehicle generations strongly appeals to me because it combines production support, structured incident analysis, technical coordination and continuous learning in a technology-driven environment.

I hold a Bachelor's degree in Computer Engineering and a Higher Professional Technical Course in Computer Networks and Systems, and I am currently pursuing a Master's degree in Cybersecurity and Computer Systems Auditing. My background combines IT support, systems, networks, databases and software development.

At NewCoffee, I provided first-line support across departments and company locations, diagnosing hardware, software, access, connectivity and business-application incidents. I managed users, groups and permissions in Active Directory, maintained Windows equipment, documented support requests and coordinated escalations with external IT providers until resolution.

I also developed an internal ITSM platform for tickets, assets, users and operational indicators. Built with React, PHP and Microsoft SQL Server, it strengthened my understanding of incident categorisation, KPI visibility, data quality, process documentation and the importance of reliable technical records in day-to-day operations.

My technical foundation includes SQL, Python and Java, together with TCP/IP, DNS, DHCP and connectivity troubleshooting. In an international network-security project, I used Wireshark and tcpdump to capture and analyse traffic and Snort to validate alerts, reinforcing a methodical, evidence-based approach to trace analysis and root-cause investigation.

I am keen to apply this experience to automotive telematics and to learn Pixida's systems, market configurations and support processes. I am available to start immediately. Portuguese is my native language and my English level is B2, with confidence in technical documentation and international collaboration. My salary expectation is EUR 25,000-27,000 gross per year, negotiable according to the overall package and responsibilities.

I would welcome the opportunity to discuss how my support experience, technical versatility and sense of ownership could contribute to Pixida's team and customers.

Kind regards,

Miguel Magalhães
